

## RPR Drug Screen Contract

As part of my decision to participate in RPR treatment services, I will be required to submit to random, observed urine screens. I understand that an initial screen will be collected during my assessment; then subsequent screens will be collected—as appropriate for my individual treatment needs. I understand that urine screen results can be used to modify the conditions of my treatment, and that all results (negative and positive) can be reported to my referral source. I understand that RPR uses urine screen results to determine the extent of my treatment plan compliance and possible need for treatment plan modification.

A urine screen result will be considered positive by RPR if:

- ▶ reported as such by Redwood Toxicology Laboratory.
- ▶ a urine is determined to be **abnormally dilute** (creatinine levels below 5 mg/dl).
- ▶ I refuse to submit to urine testing at the request of RPR staff.
- ▶ Redwood Toxicology Laboratory determines that the urine was adulterated.

I understand:

- ▶ that it is my responsibility to inform RPR staff of any prescription or over-the-counter medications I am taking. I agree to sign a release of information to any prescribing physicians.
- ▶ that any dilute urine specimen (creatinine levels between 6 and 20 mg/dl) will be considered suspect, and I may be asked to submit another sample.
- ▶ that **abnormally dilute** urine screens with creatinine levels below 5 mg/dl (inclusive) will be considered “substituted samples,” as they are not consistent with normal human urine.
- ▶ that in the event I cannot give a urine sample when requested, I will be given 8 ounces of water every half-hour, up to a total of 24 ounces in 1 ½ hours. If I still cannot provide a sample, then the test will be recorded as a refusal.

Additionally, I understand:

- ▶ that consuming foods made with poppy seeds can result in a positive opiate test; therefore, I will not consume foods containing poppy seeds.
- ▶ that passive inhalation or “contact buzz” will not be accepted as an excuse for a positive cannabis test. Passively inhaling cannabis smoke can result in trace amounts entering my system, but not enough to result in a positive screen. Consequently, testing positive for cannabis is indicative of use.

I have read or had read to me, understand, and agree to comply with the above drug screen contract.
